LEADER IN IT CERTIFICATIONS

Question: 1

In SOAP Web Services, what is a correct usage of replaceAll and line when working with sublists?

- A. Each sublist line item must have line specified when replaceAll is set to true.
- B. Specify line to update a specific sublist line when replaceAll is set to false.
- C. The value of line always corresponds with the position of the line item in the UI.
- D. Specify line to add a new line when replaceAll is set to false.

Answer: B (Specify line to update a specific sublist line when replaceAll is set to false.)

Question: 2

You're adding a new vendor using SOAP Web Services and the request is missing the subsidiary (it's a One World account). An error is returned. Where do you find the error information?

- A. An HTTP 400 is returned with details of the error in the body of the response.
- B. An HTTP 400 is returned with generic error information, with the execution log containing error details
- C. An HTTP 200 is returned with details of the error in the body of the response.
- D. An HTTP 200 is returned with details of the error in the system notes.

Answer: C (An HTTP 200 is returned with details of the error in the body of the response.)

Question: 3

Your organization requires you to build an integration application without user interaction and where the credentials will automatically expire after 9 months. What authentication approach can be used?

- A. OAuth 2.0 Client Credentials flow with certificate expiration set to 9 months.
- B. Token-based Authentication with token expiration set to 9 months.
- C. OAuth 2.0 Authorization Code Grant flow with certificate expiration set to 9 months.
- D. Token-based Authentication with certificate expiration set to 9 months.

Answer: A (OAuth 2.0 Client Credentials flow with certificate expiration set to 9 months.)

Question: 4

Your integration application needs to return a vendor bill, along with the name, email and phone from the related vendor. What is the optimal approach to implement this?

- A. Execute a saved search using the query service.
- B. Return a vendor bill and use HATEOAS links to navigate to the vendor record.
- C. Execute a dataset using the query service.
- D. Append entity to the end of the URL when returning a vendor bill, e.g., vendorbill/12345/entity

Answer: C (Execute a dataset using the query service.)

Question: 5

What is true regarding concurrency?

- A. Web services requests are blocked after exceeding the concurrency limit.
- B. Increasing account concurrency enhances the performance of individual web services requests.
- C. SOAP Web Services, REST Web Services and RESTlets each have their own concurrency limits.
- D. You can use Application Performance Management SuiteApp to reallocate concurrency.

Answer: A (Web services requests are blocked after exceeding the concurrency limit.)

Question: 6

Which statement is true if your SuiteCloud Plus license expires?

- A. All customized Concurrency Limits set on Integration Governance page are removed.
- B. The Integration Governance page will be unavailable for 48 hours.
- C. All users who access Integration Governance page will see a warning text on the top of the page.
- D. Nothing will change in the Integration Governance page.

Answer: A (All customized Concurrency Limits set on Integration Governance page are removed.)
